Warmer Frames and Reduced Heat Loss

Polyurethane Enviro-Foam insulation is injected into cavities of the sashes and frame to reduce heat transfer rates.

Warmer Glass

Duralite™ is an insulating glass edge seal system that improves the total window U-Factor. This reduces heat loss, improves condensation resistance and saves money on energy bills. Duralite™ has excellent argon gas retention properties for long life insulating glass units.

Cleaner Window Glass

SunClean™ Self-Cleaning glass is an exterior coated glass product resulting in windows that require less cleaning and reduced spotting for a clearer view.

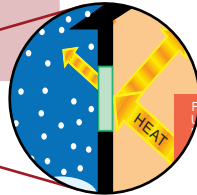

Piece of Mind

Steel-reinforced, multi-chambered, interlocking meeting rails provide excellent protection against air infiltration and improved thermal performance, security and structural integrity.

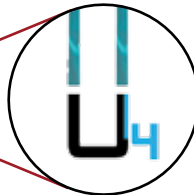

Better Clarity and More Light

UltraVue™ excellent visibility insect screening provides a sharp view of the outdoors while providing more light, air flow and improved indoor air quality. UltraVue screen cloth is GreenGuard® Certified.

Year Round Comfort and UV Protection

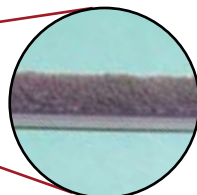

Solarban® 70XL solar control soft coat low-e coating keeps you warmer in the winter and cooler in the summer while filtering out most of the sun's damaging ultra-violet rays.

Innovative Energy Efficiency

U4 4th Surface Technology adds an additional hard coat low-e coating on the interior surface of a double-glazed insulating glass unit. This additional low-e coating provides improved window performance.

**Hand cleaning of 4th surface Comfort E-PS™ is different from cleaning of non-coated glass. Ask your window representative for a demonstration.*

Improved Indoor Air Quality

Anti-microbial Treated Gold Series™ Weather Seals are highly resistant to mold, mildew and fungus, in addition to their ability to seal against air and water infiltration.
