

Designed to ensure top performance, the Elite Green Shield window system has triple insulating glass, double Low-E glass, argon gas filling, Duralite™ warm edge spacer, and Enviro-Foam insulated frame and sashes, anti-microbial treated weather seals and UltraVue screen cloth.

Elite Green Shield Windows are ENERGY STAR®-qualified in all 50 states.

Elite Green Shield sashes have a capillary tube that is inserted and sealed in the lower sash rails for residual moisture drainage. This innovative design by B.F. Rich prevents residual moisture from being absorbed into the Enviro-Foam so it maintains its insulating properties and provides protection against the formation of mold.

Elite Green Shield design flexibility includes an internal wood grain option, divided lite choices, and a selection of 3 exterior colors.

Authorized Distributor:

An average home may lose 30% of its heat or air-conditioning energy through its windows.

Elite Green Shield energy-efficient, Energy Star qualified windows save you money each and every month.

Plus, you'll be more comfortable the whole while you live with them.

Understanding Energy-Efficient Windows

BFRich

Windows & Doors

Elite Green Shield windows are available in double-hung, 2 & 3 lite tilt-slider, stationary, architectural shapes, bow, and bay windows.

Elite Green Shield High Performance Windows

Energy Star™ Qualified In All 50 States

The Elite Green Shield Window continues to evolve taking advantage of the latest in vinyl window design technology, high performance options, and custom craftsmanship.

Fusion Welded

There's a unique feeling of confidence that comes from knowing you have chosen Elite Green Shield windows from B.F. Rich. They are not only beautiful; their heavy-gauge, fusion-welded vinyl sash and mainframe structure makes them incredibly strong and tough. Years of operation and harsh weather won't diminish their quality or performance. And they offer superior resistance to the elements and to air and water infiltration.

Beveled Design

Our beveled mainframe and sash design creates an exceptionally trim and elegant appearance.

Triple Glass

Multiple panes improve the energy efficiency of windows, but adding other advanced technologies is necessary to achieve the greatest efficiency. The Elite Green Shield Window has two soft-coat Low-E coatings, argon gas fill, and warm edge spacer, providing the best protection in extreme climates. By blocking ultraviolet radiation, Low-E coatings also reduce fading of furniture, floor coverings, and window treatments.

Frame Types

Elite Green Shield windows are designed for replacement and new construction applications. New Construction options include nail fin, brick mold, J-channel and jamb extension.

Fitted Balance

Specifically designed coil balance is a high-quality, system which allows the Elite Green Shield Double-Hung window to achieve easy, smooth operation. The stacked coil balance system creates even pressure reducing the effort or operating force needed to raise and lower the sashes.

Enviro-Foam

Enviro-Foam is injected into the cavities inside the vinyl sashes and frame to reduce heat transfer rates and improve condensation resistance.

DP-55 Rating

National building codes have changed, requiring windows to perform to higher standards than before. Additionally, many local municipalities have adopted code requirements exceeding these national standards. The Elite Green Shield double-hung window is designed to meet and exceed these new requirements as well as the needs of today's builder and homeowner.

DP-55

Wood Grain Interior

Wood grain option offers the traditional look of wood with the low maintenance and innovative energy efficient design - will last a lifetime.

The U.S. Department of Energy (DOE) in conjunction with the Environmental Protection Agency (EPA) is sponsoring the ENERGY STAR® Program in an effort to reduce nationwide energy consumption. The Elite Green Shield Window by B.F. Rich is ENERGY STAR® qualified in all 50 states.
