

GO GREEN TODAY!

In an era when individual actions can have planetary effects, thinking globally is not only an intelligent long term ecological position - it is a practical business strategy. Our approach to the 21st century environmental challenges includes global thinking to help preserve the future for our children and society.

Conserving Resources

At BFRich we understand that we have a responsibility to be good stewards of our resources and execute manufacturing and distribution practices to do so. These practices include lean manufacturing, resource and energy conservation and the recycling of raw materials such as glass and vinyl waste. Some of these are as simple as keeping vehicles in tune with properly inflated tires or reprocessing water for glass washing.

Global thinking enables us to think outside the box to envision life in a much broader perspective. What we are doing at BFRich can be summarized as "Thinking globally, acting locally."

Saving our planet, one window at a time!
